WHAT'S HAPPENING AT BIONIC

On May 15th, we celebrated 18 years of Bionic with a fun day across our offices. Team members showed their Bionic spirit by wearing company colors, decorating their offices, and enjoying Panera for lunch together. Thank you to everyone who helped make the day special and for being a part of the continued growth and success of Bionic over the past 18 years.

Northwestern University recently hosted an alumni and student networking lunch where Bionic had the opportunity to connect with many enthusiastic students interested in the field. It was a great chance to share more about the work being done at Bionic and discuss future opportunities within the profession. The event was a great experience, and the team looks forward to hopefully seeing some of these students rotate through our clinics for future clinical rotations.

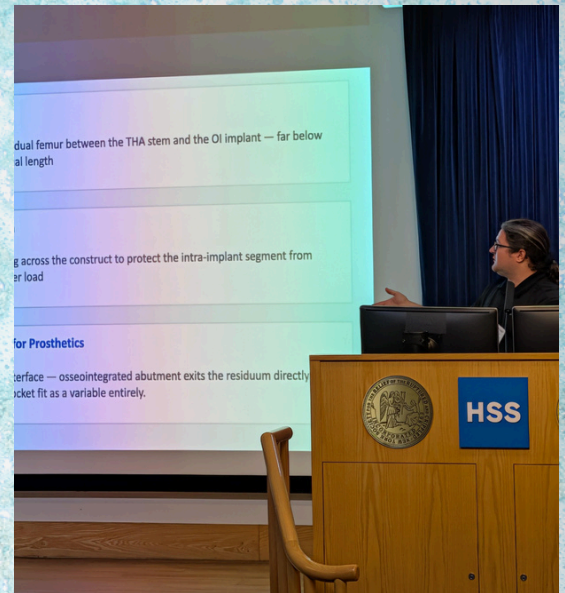

Members of the Bionic Prosthetics & Orthotics Group team recently attended OTWorld 2026 in Leipzig, Germany, one of the world's premier events focused on prosthetics, orthotics, rehabilitation, and mobility technology. The conference brought together industry leaders, clinicians, researchers, and manufacturers from around the world to share the latest advancements in patient care, emerging technologies, and innovative clinical solutions.

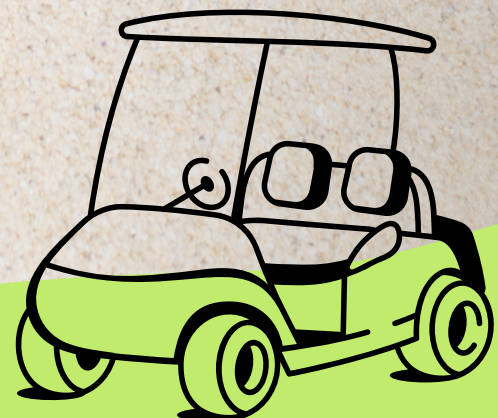

Throughout the week, our team explored developments in digital workflows, 3D printing, artificial intelligence, advanced prosthetic and orthotic systems, and rehabilitation technologies. The experience provided valuable opportunities to collaborate with global partners, evaluate new solutions, and identify ideas that can further enhance patient outcomes and clinical excellence across Bionic. We look forward to bringing these insights back to our clinics as we continue advancing the future of mobility and patient care.

Invited to speak at the HSS Osseointegration Conference, Brian Little presented a unique case involving a 21-year-old female transfemoral amputee who underwent primary osseointegration following an elective amputation due to Complex Regional Pain Syndrome (CRPS). The patient had never used a socket prosthesis and also had a hip arthroplasty on the same side, leaving only 20 mm of bone between the two implants, making this a particularly complex and noteworthy case.

Our team had a great time attending the Indiana Adaptive Golf Championship recently. They met so many inspiring golfers with multiple level amputations who were out on the course enjoying the game and showing incredible skill and determination.

It was amazing to see the positivity, confidence, and community throughout the event. Experiences like this are a great reminder of why we do what we do, helping people stay active, independent, and able to continue doing the things they love.

Patient TESTIMONIALS

Charlie M.

Palatine, IL

The level of professionalism is beyond outstanding. Emily did such an amazing job on my new leg that we need to come up with an entirely new word just how amazing she is. She and Emma are so sweet and have been welcoming throughout the process of me getting a new leg. I highly recommend Bionic Prosthetics

Lili L.

Pembroke Pines, FL

Great experience and result with an adjustment on my Xtern Summit after much frustration because I had not purchased it from a local source. I did not realize Bionics can order and fit and adjust this AFO and succinctly diagnose any issues associated with it. JP was amazing. I am one happy customer!

Danielle B.

Hickory, NC

Kayla worked with my son to get him a helmet. She went above and beyond to help us and was so patient in explaining the process.
100% recommend!

Linda Devall
Clinic Office Administrator
Rockledge, FL

Employee Of The Month Emma Blauw

“Emma is a new administrator in the Palatine office. She has the sweetest disposition and patients are sad if she is ever gone from sitting behind the front desk. She does a phenomenal job at keeping the clinicians she works with organized and on track. She has great phone skills and can make even the most difficult patient her friend. Emma has already brought so much value to our West Region team as she helps with multiple offices and wips. She is so appreciated and I am excited to see her grow in her career with Bionic. Thank you, Emma for bringing a positive attitude and willingness to help to our West Region team!”
